

## AARTO MANAGEMENT: Using R2MS to Reduce Risk & Improve Resource Efficiency

*"R2MS offers us a one stop centralised system to access information and ensure we can redirect it to where it belongs. R2MS improves operational efficiency and reduces the risk of vehicles' operator cards being suspended".* Michael Myburgh, Fleet Manager, Parmalat SA (Pty) Ltd.

### Challenge

With the implementation of AARTO country wide and with the amount of drivers we have at our sites, we found it difficult to compile and collect information of drivers and the information were not centralised on one system. Referring back to previous incidents and fines was a tedious process and a huge cost to the company.

It also became apparent that managing a huge fleet to comply with all safety and roadworthiness aspects required a user-friendly management system.

### Solution

We realised that R2MS - the web-based AARTO management solution - was the best way forward.

R2MS is more than just a compliance solution; it assists in managing our fleet and staff much better; it allows us to focus on total fleet and distribution management; and it will make it easier to manage the information of current

drivers and previous drivers that left the company - all with user-friendly reports and centralised information

### The Business Case

With over 600 drivers and 400 vehicles, the implementation of AARTO and the need to manage infringements throughout their lifecycle was feared to be an expensive, difficult and time-consuming process.

However, our use of the R2MS solution makes it easier to gather information, reduces the paper trail and makes it easier to manage and close infringements. We track fines much more effectively and with system notifications we don't fall behind and can easily meet traffic offence due dates.

With R2MS, managing drivers and vehicles is easier and information is easily accessible to our management team. R2MS improves operational efficiency and reduces the risk of vehicles' operator cards being suspended.

### About R2MS

R2MS is the market leading AARTO management system, combining and simplifying all AARTO related processes into a feature-rich and easy-to-use management tool.

The web-based solution is intuitive, implements rapidly and dramatically reduces the time and resources required to meet the challenging demands of the AARTO legislation.

### Key Features

- Single, consistent, transparent and web-based AARTO management system
- Full, complete and transparent management of the entire infringement lifecycle
- Instant, real time and user configurable scorecards, traffic light warnings and dashboards
- A centralised risk-based view across regions, depots, divisions or your entire business
